

Trench

Year	2025
Designer	Philippe Malouin

Trench Collection embodies Philippe Malouin's vision for Acerbis: sofas and armchairs that reinterpret the concept of upholstered seating with new proportions. Its pure, almost ancestral form exudes a sculptural presence, yet astonishes with its exceptional comfort - defined by a single fluid curve shaping both the seat and backrest. Trench achieves a striking sense of visual lightness, accentuated by its seemingly suspended structure, elevated on two legs set perpendicularly to the frame. The armrests, impeccably integrated, are available in a fixed configuration or as independent elements that can be freely positioned, allowing for a tailored experience of comfort.

Dimensions

Finishes

Structure The seat has a steel structure and is covered in differentiated density polyurethane. The legs are in pine plywood covered in differentiated density polyurethane with thermoplastic feet. The fixed armrest has a steel structure covered in differentiated density polyurethane whereas the independent armrest is differentiated density polyurethane with a counterweight.

The upholstery is non-removable and completely covers the two elements.
